Plant Species of Concern

June 2001

Introduction

Clustered lady's slipper
(*Cypripedium fasciculatum*)

Illustration by Jeanne R. Janish
From: Vascular Plants of the Pacific
Northwest by Hitchcock et al.

The Montana Natural Heritage Program (MTNHP) serves as the state's clearinghouse and principle source for information on species of concern, including those that are at-risk or potentially at-risk due to rarity, restricted distribution, habitat loss, and/or other factors. This report identifies 337 vascular plant species of concern in Montana, and 215 vascular plants of potential concern, based on information gathered from field inventories, publications and reports, herbarium specimens, and the knowledge of Montana botanists. Also included are preliminary Heritage ranks for 111 bryophyte species and 114 lichen species considered rare in Montana, based on recent work by experts.

This report updates and replaces the 1999 list published by MTNHP (Heidel 1999), and includes 16 new species of concern (11 vascular and 5 bryophytes). Another 13 species have been dropped as species of concern (7 vascular and 6 bryophytes) (see page iv). Species new to the lists are **bolded and underlined**. State ranks that have been upgraded or downgraded are also **bolded and underlined**. Changes in global ranks are not highlighted. Also provided are federal designations under the U.S. Endangered Species Act and administrative designations assigned by the U.S. Forest Service or Bureau of Land Management.

The Montana Natural Heritage Program continuously reviews and updates status ranks as new information and insights are generated by field surveys, research, and observations. Changes made between publications are reflected in data on the MTNHP website: <http://nhp.nris.state.mt.us/>. The on-line "Rare Plant Field Guide" also provides information on species' characteristics, identification, habitat, distribution, and references, as well as technical illustrations and photographs of the plants and their habitats. Data on plant species of concern can be queried on-line by county, topographic quadrangle (7.5') and public land management unit. Adobe versions of selected MTNHP reports are also available. A link to the NatureServe website provides access to information assembled from Natural Heritage

Program databases throughout North America (<http://www.natureserve.org/>). More detailed information or additional assistance can be requested using the “Information Request Form” on the website, or by phone, email or mail.

Please help us expand the knowledge base for Montana’s rare plants and improve this list by submitting information on plant species of concern. The field survey form included at the end of this publication (also on our website) identifies optimal information that should be submitted whenever possible.

How To Read The Lists

The lists are organized alphabetically by scientific name. For vascular plants of concern, family and common names are also provided. The nomenclature we’ve used is moving toward consistency with taxonomic treatments in Flora of North America (FNA Editorial Committee 1993+).

Heritage Program Ranks

The international network of Natural Heritage Programs employs a standardized ranking system to denote **global** (range-wide) and **state** status (Association for Biodiversity Information 2001). Species are assigned numeric ranks ranging from 1 (critically imperiled) to 5 (demonstrably secure), reflecting the relative degree to which they are “at-risk”. Rank definitions are given below. A number of factors are considered in assigning ranks — the number, size and distribution of known “occurrences” or populations, population trends (if known), habitat sensitivity, and threat. Factors in a species’ life history that make it especially vulnerable are also considered (e.g., dependence on a specific pollinator).

As an example, Clustered lady’s-slipper (*Cypripedium fasciculatum*) is ranked G4 S2. Globally the species is apparently secure, but it occurs in Montana at the periphery of its range. It is known in the state from 25 occurrences, most small, and occupies a very specific habitat in mid-seral upland forests that have become denser than they were historically.

Rank

G1 S1

Definition

Critically imperiled because of extreme rarity and/or other factors making it highly vulnerable to extinction.

G2	S2	Imperiled because of rarity and/or other factors making it vulnerable to extinction.
G3	S3	Vulnerable because of rarity or restricted range and/or other factors, even though it may be abundant at some of its locations.
G4	S4	Apparently secure, though it may be quite rare in parts of its range, especially at the periphery.
G5	S5	Demonstrably secure, though it may be quite rare in parts of its range, especially at the periphery.
GU	SU	Possibly imperiled, but status uncertain; more information needed.
GA	SA	Native in nearby states, but in Montana believed to be accidentally introduced, deliberately planted, or escaped from plantings.
GH	SH	Historical, known only from records over 50 year ago; may be rediscovered.
GX	SX	Believed to be extinct; historical records only.

Combination Ranks

G#G# or S#S#

Indicates a range of uncertainty about the rarity of the species.

Subrank

T# Rank of a subspecies or variety; appended to the species’ global rank of the full species, e.g. G4T3.

Qualifiers

Q Taxonomic questions or problems exist, more information needed; appended to the global rank, e.g. G3Q.

?

Denotes uncertainty or for numeric ranks, inexactness.

Federal Designations

FISH AND WILDLIFE SERVICE STATUS

(U.S. Endangered Species Act)

This column indicates the status of a taxon under the federal Endangered Species Act of 1973 (16 U.S.C.A. § 1531-1543 (Supp. 1996)). Note: The *Category 2 Candidates* designation was dropped in 1996 by the USFWS, and former *Candidate 2* species no longer have any formal status under ESA. Regulatory aspects of the Endangered Species Act affect plants only when they occur on federal lands or are affected by federal actions.

LE Listed endangered (**no Montana plants**)

LT Listed threatened (**two Montana plants**)

P Proposed endangered or threatened (**one Montana plant**)

C Candidate with listing warranted but precluded (**one Montana plant**)

FOREST SERVICE STATUS

The status of sensitive species on Forest Service lands is defined by the U.S. Forest Service Manual (2670.22). The Regional Forester (Northern Region) designates sensitive species on National Forests in Montana; these designations were last updated in 1999, and a full list is included on page 36. They apply only on USFS-administered lands.

S sensitive species, subspecies or variety, for which the Regional Forester has determined there is a concern for population viability rangewide or in the region

BUREAU OF LAND MANAGEMENT STATUS

The status of species on Bureau of Land Management Lands is defined by the BLM 6840 Manual. These designations were assigned by the Montana State Office of the BLM in 1996, and a full list is included on page 36. They apply only on BLM-administered lands.

S sensitive species are proven imperiled in at least part of their ranges and documented to occur on BLM lands.

W watch species are either known to be imperiled and suspected to occur on BLM lands, sus-

pected to be imperiled and documented on BLM lands, or needing further study for other reasons.

County Distribution

This column summarizes the Montana distribution by county, based on records currently in the MTNHP databases. Counties are abbreviated by the first four letters of the name, except in the case of Yellowstone National Park, which is designated by YNPK. Distribution may include records that are historic, extirpated, or which are very general within the county. For many non-vascular plants, collections and published records have not yet been assembled and entered into the MTNHP databases; hence counties of occurrence cannot be listed.

Range Notes

Because state and rangewide distribution patterns are important in assessing and understanding species' status, we have categorized distribution patterns in "range notes" for vascular species of concern.

SE State Endemic – known to occur only in Montana

RE Regional Endemic – restricted to the region, occurring in Montana and just one or very few other states

D Disjunct – occurs in Montana well outside the principle or normal range of the species, by distances that preclude gene flow

P Peripheral – occurs in Montana at the outer margins of its contiguous range

S Sparse – Montana is part of a larger range in which the species is sparsely or unevenly distributed

Additions to the Species of Concern List

VASCULAR PLANTS

Acorus americanus

Astragalus racemosus var. racemosus

**Carex chalciolepis*

**Carex lacustris*

Cryptantha humilis
Githopsis specularioides
Lesquerella douglasii
Mimulus ringens
**Papaver pygmaeum*
Salix cascadensis
Viola selkirkii

*(Upgraded from 1999 Watch Status)

NONVASCULAR PLANTS

Andreaea blyttii
Barbula eustegia
Ditrichum ambiguum
Drepanocladus cardottii
Hamatocaulis vernicosus
Lichens

Deletions From Species of Concern List

VASCULAR PLANTS

**Aster glaucodes*
**Astragalus racemosus* var. *longisetus*
**Carex paupercula*
**Psoralea hypogaea*
Salix wolfii var. *wolfii*
**Senecio eremophilus* var. *eremophilus*
Viola renifolia

*(Downgraded to Potential Concern)

NONVASCULAR PLANTS

Bartramia stricta
Polytrichum lyallii
Pterygoneurum subsessile
Tetraplodon angustatus
Tortula caninervis
Trachybryum megaptillum

Acknowledgements

We want to extend great appreciation to the many persons who contributed information on plant species throughout Montana over the past two years – those contributions are the building blocks of the MTNHP databases and this report. Special thanks goes to the botanists who reviewed and provided comments on changes to listings and status ranks including, Maria Mantas, Steve Shelly, Toby Spribile, Jennifer Whipple, Linda Pietarinen, Peter Lesica and Roger Ferriel. We're also especially grateful to Joe Elliot, Bruce

© 2001 Montana Natural Heritage Program

McCune and Roger Rosentreter who provided extensive information and input that formed the basis for ranking nonvascular plants.

Finally, a big thanks to Joy Lewis and Katrina Scheuerman for their patience, creativity and many hours of text editing, proofing, design and layout to produce this final document.

Plant Species of Potential Concern

June 2001

This comprised the “watch” list in previous publications. It includes species that are relatively common and secure within a very limited range (frequently state or regional endemics), species with unresolved questions regarding their status, and recurrent hybrids. MTNHP does not normally maintain occurrence data on these species, nor include them in data requests or environmental reviews. However, we do gather and maintain file data, including sensitive plant survey forms, maps, and/or collection label data. For those previously considered Species of Concern, we keep computerized occurrence data on file but generally do not computerize new records.

Limited distribution species (49 total) are state and regional endemics and highly disjunct species that are limited to a small area of Montana or to a very restricted habitat, but are too common within that range to be considered at-risk. These taxa are recognized for their biogeographic significance and potential vulnerability to land use changes that have major impacts on the landscape.

Species of unresolved status (160 total) need further evaluation or information. The uncertainty about their status fall into one of seven categories:

- Native? – whether the species is native to the Montana flora or was introduced by humans
- Vulnerable? – whether the species is at risk from human activities
- Data not compiled – records for the species in herbaria and publications that have yet to be assembled and evaluated
- Verified? – specimens need review and verification, or there are conflicting professional opinions on the identity of Montana specimens
- In MT? – the species has been cited for the Montana flora, but we have not been able to locate specimens to verify the report
- Taxonomy – there are questions about its validity as a distinct taxon
- Publication – the species is new to science and has not yet been documented by publication

More detailed information on species of potential concern is available upon request.

Preliminary Ranks for Nonvascular Plant Species

June 2001

BRYOPHYTES

The preliminary ranks for rare bryophytes are based on a flora compiled for the U.S. Forest Service by Joe Elliot (1995). Because non-vascular plants are typically so under-represented by collection data, the current focus is on species with the fewest documented Montana records (S1 and SH) and several species of highly restricted habitats. Principle reference collections for Montana bryophytes are the University of Montana (MONTU), Montana State University (MONT), and the U.S. Forest Service's Intermountain Research Station Resource Center Herbarium (MRC) in Missoula. The "counties of distribution" listed here are incomplete because not all Montana collection data has been compiled. Anyone who collects a bryophyte species on this list or one potentially new to the state is

encouraged to submit the Species of Concern Survey Form and map, or send a copy of the collection label information to MTNHP.

LICHENS

The preliminary ranks for rare lichens are based on a Montana lichen flora being compiled by and status recommendations from McCune and Rosentreter (in progress). Their publication will provide much more information not only on Montana lichens, but also on species of concern and the patterns of rarity exhibited by lichens in Montana. Major reference collections for Montana lichens are located at the University of Montana and Montana State University, in addition to large collections at Oregon State University (OSC),

Boise State University (SRP) and the personal herbarium of R. Rosentreter. Anyone collecting a lichen identified on this list or potentially new to the state is encouraged to submit a MTNHP Survey Form and map, or send a copy of collection label information. Location records for lichens have not yet been entered into the MTNHP databases and are not included below.

Plant Species of Concern Survey Form

MONTANA NATURAL HERITAGE PROGRAM

P.O. Box 201800, Helena MT 59620-1800; (406) 444-5354

Scientific name: _____ Date of survey: ____/____/____

Observer(s): _____

Source of lead or basis for survey (EONum if revisit) _____

LOCATION MAP: Attach a copy of 7. 5' or 15' topographic map section with search areas and locations of populations/sub-populations for each species of concern clearly marked.

County: _____ USGS QUAD(s): _____

TRS, ¼, etc.: _____

Directions to Site: (Include travel route directions and distances to towns, roads, trails, and other geographic features):

General description of site and surrounding landscape:

Land use / management:

SPECIES INFORMATION:

Number of individuals: _____
(specify estimate or count, and measure - e.g., flowering stalks, culms, clumps, etc)

Number of subpopulations and subtotals (if applicable): _____

Size of area occupied by population: _____

Phenology (% flowering, fruiting, vegetative): _____

Evidence of disease, predation, and injury: _____

Evidence of reproduction/population structure: _____

Comments / other observations: _____

HABITAT: (word picture of area occupied by the species, noting distinguishing features):

Elevation (mean or range): _____ **ASPECT:** N NE E SE S SW W NW

% SLOPE: _____ **SLOPE SHAPE:** Concave Convex Straight Other _____

Topography: Crest Upper Mid Lower Bottom Comment/Other: _____

Moisture: Dry Moist Saturated Inundated Comment/Other: _____

Light exposure: Shade Partial shade Open Comment/Other: _____

Parent material: _____

Soil texture/series: _____

Surface cover (%): Basal veg. _____ Bare ground _____ Rock _____ Gravel _____ Litter _____ Moss/Lichen _____

Plant association: (dominant species, age and structure):

Canopy cover: TREE (%) _____ SHRUB (%) _____ FORB (%) _____ GRAMINOID (%) _____

Associated species (include common, conspicuous, and characteristic spp.):

Environmental processes (periodic fire, flooding, etc.):

Anthropogenic disturbance, poss. threats: _____

Management suggestions: _____

Extent of survey, additional potential habitat in the area: _____

DOCUMENTATION:

Photograph taken? (photographer and depository): _____

Specimen collected? (collection #, and repository): _____

Identification (person making determination or reference): _____

Ecodata plot number (attach photocopied data sheets): _____

Other knowledgeable persons: _____

Owner and form/date of permission (if applicable): _____
